DUST CONTROL ENVIRONMENTAL

DCE's 1000th Unit

DCE's fantastic milestone of 1000 units was achieved in October. A proud moment as a DCE Envirojet W-Series rolled off the production line.

Our Managing Director, Martin Gill commented "We have a fantastic skilled and knowledgeable team at DCE who work hard together to make such milestones happen. A very proud moment and here's to the next 1000".

NEW TEAM MEMBERS

September saw us welcoming four new members to the DCE family.

Due to internal promotions we had key positions to fill. Owen has joined as our new administrator/scheduler in our LEV Aftermarket Team. We are also delighted to welcome Alex, filling a works engineer position. Both are already making a positive impact to our operations.

With a commitment to nurturing the next generation of engineers, especially in the dust extraction field, we are proud to have taken on two apprentices.

Gaining experience in the design team and shop floor we are sure Liam and Tyler will grow in their careers while sharing fresh insights from their college studies.

EXHIBITING & NETWORKING

At DCE we love meeting people and we recently enjoyed attending a couple of fantastic meet and greet events.

The Made in Yorkshire Expo was a great event with a chance for manufacturers to strengthen their supply chain options.

As proud supporters of West Yorkshire Manufacturing Services we happily attended their mini expo at the beginning of November. A great opportunity to catch up with like minded businesses, discover the support for SMEs, networking over a lovely lunch.

Recent Projects

Marshall's West Lane facilities in West Yorkshire, needed a high-performance dust extraction system capable of managing welding fumes, grinding dust and mild steel particulate matter.

The system had to effectively capture and remove hazardous airborne particles drawn directly from welding stations to protect the health of workers whilst maintaining a clean and compliant workspace.

The allotted installation space, meant consideration needed to be given to the size of unit supplied.

Hot off the press is our brand-new DCE brochure. A quick read to instantly inform our customers about:

★ Who we are
★ What we do
Our quality and high standards

From cutting-edge dust & fume extraction systems to expert customer and aftermarket care, we tailor solutions that fit your operations perfectly.

New DCE Brochure

Paramount Powders required a high-performance extraction system that could seamlessly integrate with their existing equipment. Due to the nature of the pigment dust it was critical that the solution met stringent ATEX compliance standards.

In addition to the system itself, installation and ducting were also required. A key challenge of the project was providing a compliant extraction system powerful enough to handle the dust load that would fit within the constraints of the available site footprint.
