

DUST CONTROL ENVIRONMENTAL

NEWSLETTER SPRING 2026

Strong End to the Year for Dust Control Environmental

Spring closed on a high note for Dust Control Environmental (DCE) with a strong end to their financial year. Turnover rose by 10%, an impressive achievement given the downturn in global market conditions. This performance reflects the continuous hard work of the DCE team. An increase in team members, smarter ways of working and new stock control facilities have all played a part in strengthening the business. It's been a great effort by everyone at DCE, leaving the company in a great position to attack the new challenges of the next financial year.

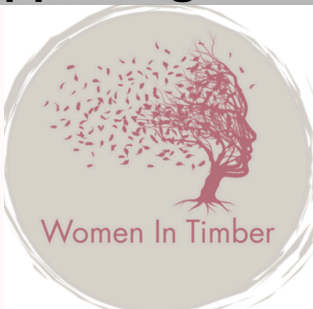

Lambson Innovate and DCE have worked together for over 17 years now. For us it is a pleasure to partner with an innovative, local company, renowned for their world-leading laminate products. We provide Lambson with an LEV testing and maintenance package that ensures their operations and workforce are protected from process generated dust. You can read the case study on how the partnership works on our website. It also includes a great review from Lambson Innovate which we are grateful for.

Latest Case Study – LEV Compliance Made Easy

Supporting Women in Timber

This year we are proud to be sponsoring the Women In Timber UK seminar, taking place Thursday 1st October 2026.

It's great to be supporting such a network that provides a platform where women in the timber industry can meet to share their experiences and challenges as well as gain inspiration and key tools to help strengthen their voice within the timber industry.

The Big Build has Started

The extension to the main facilities at Wakefield HQ has kicked off! The expansion will enhance production capability, quality control, and operational efficiency.

The build project certainly set off on a dramatic note with the up and over lift of a redundant container. You can view the drama on our YouTube channel. Our Owner and Managing Director, Martin said of the event “It’s great to see the work beginning on the new factory extension, and in such a memorable way. Not only does this building expansion represent a significant step forward for Dust Control Environmental’s growth strategy, but it also reinforces our commitment to manufacturing in Wakefield.”

Check your LEV Compliance

Nothing replaces the legal requirement for proper LEV maintenance and the mandatory periodic LEV testing.

However, we’ve created a short questionnaire to help you assess how effectively your LEVs are performing between those scheduled checks.

If something isn’t quite right, early detection is always the smarter move – it can prevent costly shutdowns and avoid more significant repairs later on.

Simply scan the QR code below to complete the check. It only takes a couple of minutes and we’re here to help if you have any queries.
